Summary: My PhD thesis on multi-agent systems to represent reasoning with explicit representation of expectation can solve the collective action problem was submitted under the supervision of Professor Stephen Cranefield (University of Otago, New Zealand) and Professor Jeremy Pitt (Imperial College, London). I worked as a research assistant in the computer science department at Otago University in 2021. I am a member of the Centre for Artificial Intelligence and Public Policy (CAIPP) at Otago since I am passionate about fair and transparent AI. I am also an IEEE and SINZ member. I received a CRG grant and worked as a postdoctoral research assistant on AI in telehealth systems. As a visiting scientist at the Indian Statistical Institute, I've been using explainable AI to work on three projects related to climate change. I worked on my pre-PhD research at the Indian Statistical Institute in collaboration with the University of Technology, Sydney.

🎓 EDUCATIONAL QUALIFICATIONS

- Doctor of Philosophy (PhD) in Information Science (📅 2019 - 2022, graduate in 2024)
University of Otago, New Zealand.
 - Supervisor: Prof. Stephen Cranefield
 - Co-supervisor: Prof. Jeremy Pitt
- Master of Technology (M.Tech) in Computer Science (📅 2011 - 2013)
West Bengal University of Technology, India. (GPA: 8.87/10)
- Bachelor of Technology (B.Tech) in Computer Science (📅 2006 - 2010)
West Bengal University of Technology, India. (GPA: 7.43/10)
- Math Honours
I completed two years of a three-year honours course before switching to BTech.

🔬 RESEARCH EXPERIENCE (📁 Multi-Agent Systems, Artificial Intelligence, Planning)

- PhD Research at the Information Science Dept, Univ. of Otago, NZ (Submitted)
 - Thesis Title: A generic approach to reasoning about collective action problems using expectations.
 - Funding: PhD funded by Marsden Fund, in collaboration with Imperial College.
 - Research paper accepted in COINE 2021 and COINE 2023, and another paper from the bursary period wanted to submit to the Journal of Artificial Intelligence Research.

Thesis Summary: My work focuses on the use of logical reasoning regarding expectations and generalised representation to help computational agents to solve a range of collective action problems. The different applications of expectation-related reasoning, such as expectation, team reasoning norms, norm, and norm emergence from emotion, were explained in this work. The central claim of my research is to build a generalised computational model in which symbolic representations of norms are used as an input and

an Event Calculus (Prolog-based) is used to represent how explicit reasoning of expectation is generated and how it is fulfilled or violated.

- **Post-PhD Research** ( 2023)
 - I worked as a data analyst for a Telehealth project (one journal paper is about to be submitted).
 - Developing explainable AI for the prediction and detection of wildfires and precipitation (a paper is about to be submitted to the Journal of Applied Computing and Geosciences).
- **Research Assistant at the Computer Science Dept. Univ. of Otago, NZ** ( 2021)
 - A short project on the computational analysis of text data for emotion recognition.
- **Research collaboration at the Information Science Dept. Univ. of Otago, NZ.**
 - **Prediction of Wildfire Susceptibility Using Explainable AI.**
Project: We propose a framework that adopts recent advances in methods for obtaining optimal models along with the application of SHAP values to obtain the most important features which affect the performance of wildfire prediction models. We apply this framework for both the purpose of detecting the conditions under which a forest fire is likely to start, and once a fire has begun, predicting the area burned by it.
- **A Preliminary Investigation of LEACH, TEEN, and DEEC Towards Wireless Sensing Application (Extention of MTech Thesis)**
Project: In wireless sensor networks, the nodes operating in a distributed environment operate on a limited source of energy and rely on efficient power optimisation protocols to operate for the appropriate duration of their wireless data-sensing applications. In this paper, we present a comparative analysis of three prominent hierarchical clustering protocols: LEACH, TEEN, and DEEC.
- **Pre-doctoral Research at the Indian Statistical Institute** ( 2017 - 2018)
 - **Research: Machine Learning applied to facial image and pin-code detection.**
 - 3 papers were published in collaboration with Univ. of Technology, Sydney, and the Indian Statistical Institute (ISI).
Project: During my pre-PhD research, I collaborated with the ISI CVPR department under the supervision of Dr. Umapada Pal. Convolutional neural networks were used to detect the pin-code in both structural and unstructured postal documents, as well as to authenticate facial images. CNN has been found to be effective at identifying individuals from degraded face images.

+ RESEARCH SUPERVISION:

- In collaboration with the Indian Statistical Institute, I started mentoring a PhD student. The study focuses on the use of machine learning methodologies for wildfire prediction.
- Co-supervised the final year thesis of one Master of Information Science student at Kalyani Government Engineering College in 2020-2021. In that project, we classified various types of road obstacles using a convolutional neural network. We

also used the YOLO algorithm to classify and locate various types of objects in front of the car.

- Research project supervision for four Bachelor students of Computer Science at Narula Institute of Technology in 2017-2018.

TEACHING EXPERIENCE

- Tutor/Demonstrator at the University of Otago, NZ ( 2019 - 2024: 9 semesters)
 - 2023: Digital Health, DIGH 708 & 709, Review innovations in Digital Health technology that promote well-being and self-management.
 - 2024, 2023, 2022, 2021: COMP 120, Data Science using R.
 - 2023, 2022, 2021, 2020: INFO 204, Machine learning using Python coding.
 - 2022: INFO 301, Software development.
 - 2021: INFO 310, Software and system development using JAVA.
 - 2019: COMP 101, R and SQL coding.
- Guest Lecturer (part-time) at several universities in Kolkata, India ( 2013 - 2018)
 - Jadavpur University - Taught multimedia systems.
 - Kalyani Govt Engg College - Taught Algorithms, Automata, Graphics, and Multimedia.
 - Aliah University - Taught Sensor Networking theory.
 - Narula Institute of Technology - Taught C, Multimedia, and Networking theory.

+ PROFESSIONAL PORTFOLIO

- **RESEARCH FUNDING/GRANTS**
 - 57250 NZD: Marsden scholarship (3 years PhD studies).
 - 2964 NZD: Pūtea Tautoko - Student Relief Fund.
 - 2800 NZD: Departmental award.
 - 3500 NZD: Technical Education Quality Improvement Programme
- **MEMBERSHIP**
 - Member of the Centre for Artificial Intelligence and Public Policy (CAIPP), NZ.
 - Member of the Artificial Intelligence Researchers Association (AIRA), NZ.
 - Student member of IEEE.
 - Member of Software Innovation NZ (SINZ).
- **PEER REVIEW**
 - **Conferences:** SMC-2023
- **WORKSHOP ORGANIZING COMMITTEE**
 - School of Computing Postgraduate Symposium 2023, University of Otago.
 - HRC Telehealth 2023, University of Otago.
- **GRANT**
 - Commerce Research Grant Round 2-2023.
- **PROFESSIONAL POSITION**
 - Affiliated researcher (continue)
 - Visiting Scientist at Indian Statistical Institute (Mar, April, 2024).
 - Postdoctoral research assistant at the University of Otago (Nov, 2023 to Feb, 2024).
